EXPANSION OF THE LIST OF RADIOANALYTICAL RESOURCES IN THE UNITED STATES

The National Nuclear Security Administration Nevada Site Office (NNSA/NSO) currently maintains a database of the country's radiochemistry capabilities, which is instrumental in a Federal Radiological Monitoring and Assessment Center (FRMAC) response. In the event of a radiological emergency, FRMAC coordinates and facilitates all federal offsite monitoring and assessment efforts to assist the Lead Federal Agency (LFA), state(s), tribal and local authorities in a timely manner. FRMAC provides an operational framework for coordinating and managing these offsite radiological activities during a radiological emergency. State and local agencies are invited to collocate and prioritize monitoring efforts in the FRMAC.

In an effort to expand the list of identified radioanalytical resources in the United States which could assist in the event of a radiological emergency, NNSA/NSO is soliciting the full contact information for organizations and activities that have analytical equipment to measure radioactivity. Examples of these types of organizations are federal government laboratories in various organizations (DOD, EPA, NRC, FDA, USDA, etc), state government laboratories, local public organizations (Health Departments, Water Treatment Facilities, etc), colleges and universities, commercial environmental laboratories, nuclear power plant laboratories and internal quality assurance and quality control process laboratories.

Although the current database of radioanalytical capability is extensive, we would rather receive duplicates of information that we already have, rather than miss a laboratory. Please fill out the enclosed form and send to the address indicated or e-mail the basic contact information to Mr. Nielsen via e-mail at, nielseec@nv.doe.gov.

Enclosed for your information is the short questionnaire that you will access through a web site. This information will be compiled into a database to allow FRMAC to distribute sample analysis requirements across available and appropriate analytical capability. The information you provide will be used to evaluate and prioritize analytical support in the event of a radiological emergency, which will be held within the emergency planning community. By completing the questionnaire, you are under no obligation to accept any samples in an emergency. At the same time, FRMAC and LFA are under no obligation to use your analytical capability.
